Caption: When or where is it appropriate for the average delivery driver to work on a sunny day?

Description:

We were given this question when we gave at least 13 delivery drivers a survey to answer. 10 of them were interviewed, and at least 5 of them were willing to participate. They all said that Doctor Andreas Flourus, an expert scientist of ours who studies heat and labor, and who helped us design this specific experiment, recommended they repeat the experiment in order to get more data and better conclusions from our team.

The answer to this question is that there is no time, but you can survive the heat stress by following these simple rules:

- Staying Hydrated
- Taking Frequent Breaks in Shaded or Air-Conditioned Areas

Do all of those if the heat gets too extreme.

Heat stress is very obviously a big issue in the workplace. Over a million people around the world are exposed to it each year. Many of them experience heat-related problems such as dehydration, fatigue and irritability, fainting, visual impairment, burns, and slipping hazards. All of these issues were either ignored or not reported. This experiment can help fix that, because the media will eventually pick this up to become a big news story. However, that does not mean that we're done with this experiment. In the meantime, we're trying to fix this problem, but unfortunately, only time will tell.

On My Way back from Paraguay, there was a massive Hat wave!

Caption:

I'm fine guys, but the truck has been in the 100's for a while and i'm starting to feel like im cooking in an oven or a microwave. Delivering all these goods took a while, cause of the traffic I had time to read up on an article. On this article it said that they used a calculator from the Heat-Health Organization to find out that the delivery drivers were exposed to high and extreme health risks due to heat. For example, the day the delivery girl suffered mild hyperthermia.

Isn't that crazy? I didn't even notice until now that I can very well die from this job, the more you know I guess.
