

Technology and Imagination (15 min)

What we build begins with what we are able to imagine.

Artificial Intelligence is the ability of machines or computer programs to perform tasks that would normally require human intelligence, such as learning, problem solving, or decision making.

Technology Begins With Vision! (and sometimes with fiction)

1. Do you know which show this image is from?
2. What types of technology do you see in the image? What types of human intelligence are being performed by the technology?
3. How does the tech in the show relate to some of the tech we utilize in daily life now?

Group Reflection

What connections did we make between this imagery, from a show made in the 1960s, and our technology today? What can those connections tell us about the relationship between imagination and technology?
